DIS BROADCASTER ALLOWS YOU TO STREAM YOUR CONTENT ON YOUR NETWORK

Dise Broadcaster is like a regular Dise Replay but with the ability to stream your content to your video output card or as an IP stream. This means that you could still use the same management tools as for your regular digital signage network. So if one node of your network requires a streaming solution it is just as simple as adding an additional Dise Replay.

With Dise Broadcaster it is now possible to use small and cost effective MPEG digital signage players that minimizes hardware maintenance and simplifies installation of large scale broadcast style information systems.

In many building-societies information to the tenants is vital. Many require their own information channel provided with their regular cable TV but even old information boards in the staircase are nowadays often replaced by digital screens. Being able to quickly address all the tenants at the same time with up to date information is not just cost efficient but adds a value to the overall service. This is where Dise Broadcaster really makes a difference.

Eliminate expensive video converters

Dise Broadcaster gives you the possibility to stream your content from Dise Replay either as an IP stream or as a direct output to a video output card, for example to a SDI or analog video card. Dise Broadcaster works like a regular Dise Replay but with the ability to stream out the playback.

A lot of clients that uses Dise today are running it as a broadcast channel in their closed-circuit television network. Dise Broadcaster eliminates expensive video converters and hardware encoders and delivers a video signal in the format that you require. Providing a digital stream direct from your player computer increases the many benefits you get from Dise.

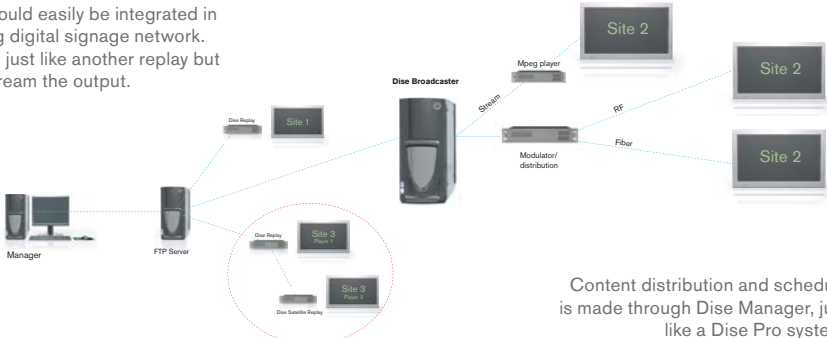

Use the same management tools as for your regular digital signage network

Dise Broadcaster is like a regular Dise Replay but with the ability to stream your content to your video output card or as an IP stream. This means that you could still use the same management tools as for your regular digital signage network. So if one node of your network requires a streaming solution it is just as simple as adding an additional Dise Replay.

With Dise Broadcaster it is now possible to use small and cost effective MPEG digital signage players that minimizes hardware maintenance and simplifies installation of large scale broadcast style information systems.

Dise Broadcaster could easily be integrated in your already existing digital signage network. Dise Broadcaster is just like another replay but with the ability to stream the output.

Content distribution and schedule is made through Dise Manager, just like a Dise Pro system.
