

Dise Setups

Typical Dise Digital Signage Suit Setups

Dise LS System - suitable for small installations such as receptions, hotels, shops or schools

In this setup the same computer is used to create presentations and to playback them which is suitable for smaller installations. The LS package contain Dise Composer and Dise Replay.

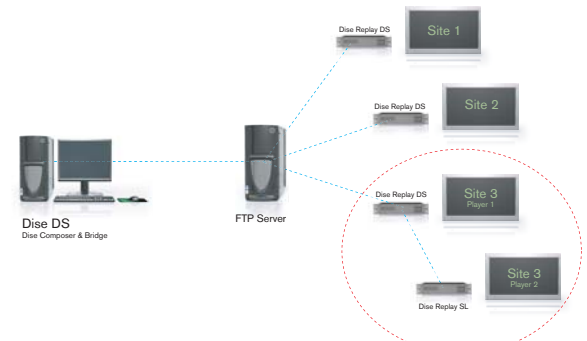

Dise DS System - smaller networked system used for corporate, public or retail installations

In this setup the one or more computers are used to create content and distribute dynamic presentations.

Dise Composer is used to create presentations with or without templates and Dise Bridge is used to send content to a FTP server or a Shared Folder on a local network.

Each player runs Dise Probe, which downloads content from the FTP or the Shared Folder, and Dise Replay that plays content 24/7.

Dise replay is in this setup capable of playing multiple layered presentations thus enabling overlapping zone based screen layouts.

Dise DS with Dise Complete - large professional networked system for corporate, public or retail installations

This setup is similar to a Dise DS system but adds Dise Complete. Dise Complete is a set of tools that handles workflow, user management, statistics and content management, system management such as monitoring of software and equipment, event logs and issue tracking.

Dise Complete is an open system that enables user customization such as implementation of customized webinterfaces or connections to existing business systems such as CRM systems.
